

License Plate Detector

Using Image Recognition for Car Park Monitoring

SYSTEM’S DESCRIPTION

The AI system, developed for retail store managers and security personnel, uses image recognition technologies like optical character recognition to make parking lot allocation faster and more secure for customers.

BENEFITS

<div><div></div> benefit enjoyed by</div> <div><div></div> benefit not enjoyed by</div>	<div>Customers</div> <div>Store</div> <div>Institutions and Environment</div>
Reduction in parking time	<div><div></div><div></div><div></div></div>
Reliable calculation of parking time	<div><div></div><div></div><div></div></div>
Improvement in the security of the parking area	<div><div></div><div></div><div></div></div>
Reduction in the need for human labor at parking points	<div><div></div><div></div><div></div></div>
Reduction in the congestion and unauthorized parking	<div><div></div><div></div><div></div></div>

EU AI Act classification

The system poses limited risk due to its processing of personally identifiable data within non-critical domains

EU AI Act, Annex III

IMPACT ASSESSMENT REPORT

available in multiple formats including Braille

Last update: 28 Feb 2024

RISKSMITIGATION STRATEGIES

Capability Risks

Accidentally capturing images of vehicle’s surroundings	Filtering collected images images to include only licence plates
Delays during power and network disruptions	Maintaining traditional parking allocation methods

<div>Customers</div> <div>Store</div> <div>Institutions and Environment</div>	<div><div></div> risk faced by</div> <div><div></div> risk not faced by</div>
<div><div></div><div></div><div></div></div>	<div><div></div><div></div><div></div></div>

Human Interaction Risks

Information imbalance between staff and customers during parking conflicts	Installing interactive screens for customers to access parking rules and check their current parking status
--	---

<div><div></div><div></div><div></div></div>
--

Systemic Impact

Perpetuating the perception of constant surveillance	Automatic deletion of captured license plate images after seven days
--	--

<div><div></div><div></div><div></div></div>
--

SYSTEM’S DATA

applicable

not applicable

Essential

License plate images	<div><div></div><div></div></div>
Logs with the time of entry and exit	<div><div></div><div></div></div>

Potentially employed for future uses personally identifiable information

PERFORMANCE OF MODELS ON DATA

Data	Model	Version	Accuracy
License plate images	CNN-Plate	3.1	97%
	CNN-Digit	5.1	94%
Logs wih the time of entry and exit	Logistic Regression	8.1.1	75%
