

# License Plate Detector

Uses image recognition to improve parking lot monitoring

## SYSTEM’S DESCRIPTION

The AI system, developed for retail store managers and security personnel, uses image recognition technologies like optical character recognition to make parking lot allocation faster and more secure for customers.

## BENEFITS

	<div>Customers</div>	<div>Store</div>	<div>Institutions and Environment</div>
Reduction in parking time	<div></div>	<div></div>	<div></div>
Reliable calculation of parking time	<div></div>	<div></div>	<div></div>
Improvement in the security of the parking area	<div></div>	<div></div>	<div></div>
Reduction in the need for human labor at parking points	<div></div>	<div></div>	<div></div>
Reduction in the congestion and unauthorized parking	<div></div>	<div></div>	<div></div>

EU AI Act classification

The system poses limited risk due to its processing of personally identifiable data within non-critical domains

EU AI Act, Annex III, recital 55

### IMPACT ASSESSMENT REPORT

available in multiple formats including Braille

Last update: 28 Feb 2024

## RISKS

## MITIGATION STRATEGIES

1

2

3

 no, low, moderate, high risk faced by

### Capability Risks

Accidentally capturing images of vehicle’s surroundings	Filtering collected images images to include only licence plates
Delays during power and network disruptions	Maintaining traditional parking allocation methods

Customers

## SYSTEM’S DATA

() applicable (or not)

### Essential

License plate images	<div></div>	<div></div>
Logs with the time of entry and exit	<div></div>	<div></div>

Potentially employed for future uses

Personally indetifiable information

## PERFORMANCE OF MODELS ON DATA

Data	Model	Version	Accuracy
License plate images	CNN-Plate	3.1	97%
	CNN-Digit	5.1	94%
Logs with the time of entry and exit	Logistic Regression	8.1.1	75%
